RECEIVED
07-Oct-25

Helicobacter pylori Antigen

Specimen type - Stool

Collected

05-Oct-25

SERVICE

H. pylori Antigen

RESULT

POSITIVE

GIT Markers Comment

HELICOBACTER PYLORI ANTIGEN: POSITIVE

A POSITIVE result, indicates a current infection and is not affected by the presence of other organisms, antacids, barium sulphate, blood or fat. Please correlate infection clinically with signs and symptoms.

Treatment:

Triple therapy: PPI, clarithromycin and amoxicillin or metronidazole, 7-14 days.

If penicillin allergic: PPI, clarithromycin and clindamycin or metronidazole, 7-14 days.

A suggested follow up test is recommended within 4 weeks post therapy.

If treatment is unsuccessful, further investigation of H. pylori may be warranted using metagenomic sequencing to evaluate virulence factors and potential resistance gene markers.

Methodology

Chemiluminescence Immunoassay (CLIA)
