LFT Comment

GAMMA-GLUTAMYLTRANSFERASE COMMENT:

GGT elevation is sensitive, but non-specific, for hepatobiliary diseases. Biliary obstruction can be intrahepatic, extrahepatic or infiltrative. Microsomal GGT can also be induced by many drugs (phenytoin etc.) and ETOH, this change is reversible.

AMYLASE	1	0 - 100	units/L	
LIPASE	42	13 - 60	units/L	

GIT ASSESSMENTS

	Result	Range	Units	
Pancreatic Elastase 1	>500	> 200	ug/g	

Digestive Markers Comment

PANCREATIC ELASTASE: Normal exocrine pancreatic function. Pancreatic Elastase reflects trypsin, chymotrypsin, amylase and lipase activity. This test is not affected by supplements of pancreatic enzymes. Healthy individuals produce on average 500 ug/g of PE-1. Thus, levels below 500 ug/g and above 200 ug/g suggest a deviation from optimal pancreatic function. The clinician should therefore consider digestive enzyme supplementation if one or more of the following conditions is present: Loose watery stools, Undigested food in the stools, Post-prandial abdominal pain, Nausea or colicky abdominal pain, Gastroesophageal reflux symptoms, Bloating or food intolerance.
