

MOE-Tox Complete - Test Code 5046

Turnaround Time : 12-15 business days

Specimen Type: Spot Urine

Description

The MOE-Tox Complete Profile is a detailed urine test that looks at both environmental exposures and how your body is handling them. It combines multiple testing panels into one report, giving your practitioner a broad view of toxic load and its effects on metabolism and detoxification.

This test screens for mycotoxins, heavy metals, herbicides, and other environmental chemicals, as well as key organic acid metabolites that reveal how these exposures may be impacting energy production, detox pathways, and gut health. By examining both what your body has been exposed to and how it's coping, the profile highlights patterns of toxic load and stress that may contribute to fatigue, digestive issues, or other chronic concerns.

The results come with clear summary indicators and interpretation, helping prioritise which exposures need attention, identify possible sources, and plan personalised follow-up or support strategies. This integrated approach provides a foundation for targeted interventions that support detoxification, energy, and overall wellbeing.

Whats included?

- 48 Environmental Pollutants
- 16 Mycotoxins
- 41 Heavy Metals and Minerals
- 63 Organic Acids
- Glyphosate

Conditions and Symptoms

- Chronic or unexplained fatigue
- Cognitive dysfunction or brain fog
- Inflammatory or immune-related conditions
- Poor or inconsistent response to treatment
- Suspected mould or environmental exposure
- Complex of overlapping symptom patterns

Complementary Testing

- Microbiomix Metagenomic Mapping (test code 2212)
- EndoMAP (test code 1501)

Accreditations Include:

- NATA ISO 15189 – Requirements for Quality and Competence in Medical Laboratories*
- CLIA – Clinical Laboratories Improvement Amendments*
